Process Scheduler

The scheduler manages process execution by determining which process runs at any given time. It ensures fairness and efficiency, supporting various scheduling algorithms for multi-tasking.

File System

The File system manages how data is stored, organized, and retrieved on storage devices. It supports various formats like ext4, FAT, and NTFS.

Network Stack

The Network stack enables communication over Networks using standard process like TCP/IP. It handles packet routing, error checking, and ensures reliable data transmission.
