

SDLC (TASK-1)

Task-1: Use-Case Diagram Creation

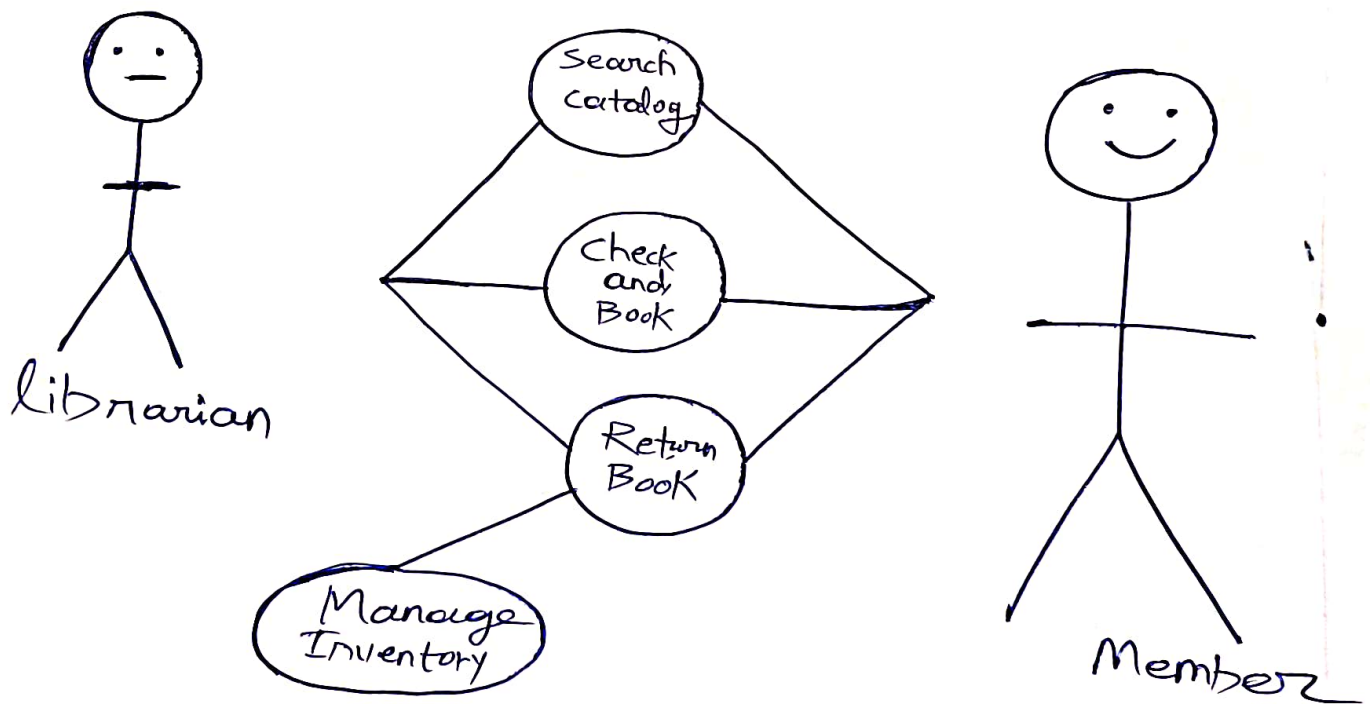

Objective: Create a Simple use-case diagram for a Library Management System.

Steps to perform

Identify at least 2 actors who will interact with the system (e.g., Librarian, Member).

Determine 2 to 3 main functionalities (use cases) that the actors will perform (e.g., check out Book, Return Book).

Draw a use case Diagram with these actors and use cases, showing the interactions between the actors and the system.

A Library Management System is a software that helps manage the daily activities in the library like issuing books and

Managing members. There are two main actors in these system

- ① Librarian - manages book check-out
- ② member - borrows and Return books.

Main use cases include's :-

- Check out book - done by both Librarian and Member.
- Return book - performed by the Member.
